PROFESSIONAL SUMMARY

DevOps Engineer who builds and runs Kubernetes platforms on AWS for healthcare and life-sciences applications at IQVIA. Promoted to DevOps Engineer 2 after leading the migration of 20 microservices from EC2 to Amazon EKS, cutting compute cost by 75%. Owns GitOps CI/CD, Terraform provisioning, production releases, monitoring and incident response, plus the CI, Terraform and Helm standards other teams follow. IQVIA Impact Award winner.

TECHNICAL SKILLS

- **Cloud:** AWS (EKS, ECR, EC2, VPC, IAM, ALB, Route 53, CloudFront, EFS, S3, RDS, KMS, Secrets Manager, OpenSearch, CloudWatch); Azure (Container Apps, Key Vault) and GCP (Cloud Run) via projects
- **Kubernetes & Containers:** Amazon EKS, Docker, Helm v3 chart development, HPA, Cluster Autoscaler, AWS Load Balancer Controller, EFS CSI, External Secrets Operator
- **CI/CD & IaC:** GitLab CI/CD (templates, approvals, rollback), Argo CD (GitOps, App-of-Apps), GitHub Actions (projects), Terraform (modules, S3/DynamoDB state, workspaces), Maven, Git
- **Observability:** Datadog (APM, logs, metrics, dashboards, monitors), CloudWatch (alarms, dashboards), Splunk
- **Security & Networking:** IAM least privilege, IRSA, KMS encryption, VPC, NAT, peering, Security Groups, NACLs, TLS
- **Operations:** Release and change management, incident response, RCA, runbooks, DR; ServiceNow, Jira, Confluence
- **Scripting & Linux:** Bash, Python (FastAPI), YAML; Linux server administration; Java/Tomcat application deployment

PROFESSIONAL EXPERIENCE

IQVIA — Bengaluru, India **Feb 2024 – Present**

DevOps Engineer 2 | PROMOTED FROM DEVOPS ENGINEER 1

- Led the containerization and production migration of **20 drug-safety microservices** from standalone EC2 to **Amazon EKS**, owning Dockerfiles, Helm, networking, storage and CI/CD; cut compute cost by **75%** and footprint by **60%** through Spot instances, rightsizing and **Cluster Autoscaler + HPA**.
- Designed the target-state EKS architecture (networking, On-Demand and Spot node groups, deployment strategy, observability) as primary technical POC for a 15-member team; received the **IQVIA Impact Award**.
- Built **GitLab CI/CD** and **Argo CD** GitOps pipelines: Maven build, Docker image to Amazon ECR with SHA-based tags, automated Helm values updates and Argo CD sync to EKS, replacing manual SSH/Tomcat deployments.
- Provisioned EKS, ECR, IAM, VPC and Secrets Manager with reusable **Terraform** modules (S3 remote state, DynamoDB locking) that other teams now use, plus the CI templates and standard Helm chart they follow.
- Coordinate releases across Dev, QA, UAT, Production and DR through **ServiceNow** change requests: deployment windows, approvals, post-release validation, rollback and hotfixes and status updates to global teams.
- Built high availability across AZs (ALB with TLS, EFS CSI, pod anti-affinity, health probes); helped build the **DR environment in a second AWS region** and ran failover drills; upgraded EKS versions, add-ons and base images.
- Secured workloads by removing static credentials with **External Secrets Operator**, **IRSA** and AWS Secrets Manager, with least-privilege IAM, KMS encryption at rest, Security Groups and NACLs.
- Set up monitoring with **Datadog** on EKS (Java APM, logs, metrics) and CloudWatch: added warning thresholds ahead of alerts through **15+ monitors** and 3+ dashboards, with alerts to Microsoft Teams and email.
- Lead the response to production incidents and perform RCA across Kubernetes, AWS networking and Java services; traced a cross-system API outage to a Security Group/routing gap; write incident runbooks and Bash tooling.

FEATURED PROJECTS

Event-Operations Platform on Azure — Freelance **Terraform, Azure, GitHub Actions**

- Led the move from GCP Cloud Run to **Azure Container Apps**, with Terraform modules for networking, PostgreSQL behind a private endpoint, Key Vault and Managed Identity; **GitHub Actions** builds once and promotes the same SHA-tagged image from dev to prod, with zero-downtime schema migrations.

Regulatory Audit RAG System — IQVIA Hackathon Finalist (Top 10) **Python, FastAPI, ChromaDB, LLM API**

- Built a Retrieval-Augmented Generation compliance service with FastAPI semantic-search endpoints over ChromaDB, indexing historical audit findings and remediation playbooks; placed Top 10 company-wide.

CERTIFICATIONS

- **HashiCorp Certified: Terraform Associate (004)** · Credly: fff54a45-392c-44fd-9e08-bd745c8e09a3 **Jan 2026**
- **AWS Certified Solutions Architect – Associate (SAA-C03)** · Credly: bdd0eda1-411b-4cd4-a2b6-10155483f8cf **Sep 2025**

EDUCATION & LEADERSHIP

NIT Calicut — B.Tech, Mechanical Engineering | **CGPA: 7.57 / 10.0** **2019 – 2023**

Convenor, Ragam'23 (NITC Annual Cultural Fest): directed 200+ events across 30+ committees and 100+ leads.
